Can you identify the organs often affected by heterotaxy?

liver

heart

lungs

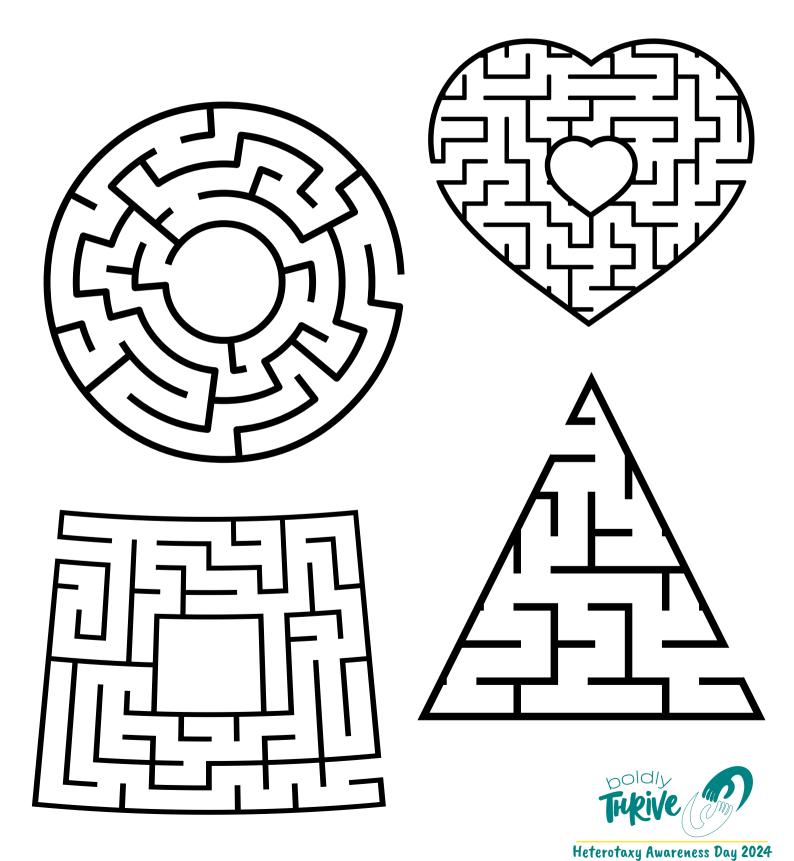

stomach

spleen

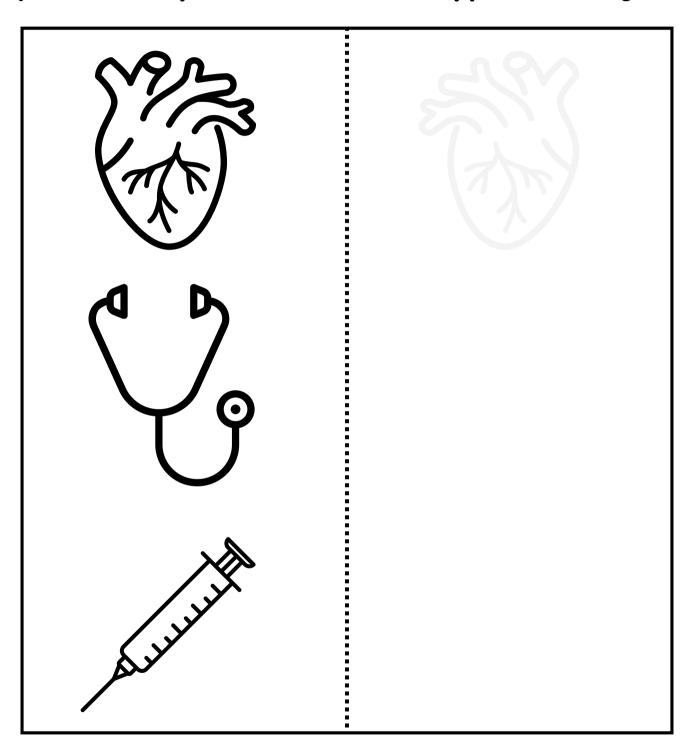

intestines

It can take real bravery to live life with heterotaxy. Are you brave enough to find your way through these mazes?

Sometimes kids with heterotaxy are born with what we call "mirror image" organs, flipped from left to right. Can you draw the pictures on the left flipped to the right?

Kids with heterotaxy have to be brave. Draw a picture and write about a time you were brave.
